

## LI: To investigate the four layers of the rainforest and the animals that live in this habitat.

### Steps to success:

- I can classify the main layers of the rainforest in their correct order.
  - I can place the animals in the correct layer based on their skills.
  - I can identify the features that can be found in each layer.
- Read the information about the different layers of the rainforest. Copy this information in their right place. The first one has been done for you:

<b>Forest Floor</b> Animals may have the ability to camouflage themselves against soil, tree trunks and leaves. They are not good at climbing.
<b>Understory</b> Animals can climb to this layer and may try to hide away from predators in the flowers and plants.
<b>Forest Floor</b> Animals may have the ability to camouflage themselves against soil, tree trunks and leaves. They are not good at climbing.
<b>Understory</b> Animals can climb to this layer and may try to hide away from predators in the flowers and plants.
<b>Emergent Layer</b> Animals have wings for flying or gliding; or are very good climbers.
<b>Canopy</b> Animals have long arms for swinging or claws for climbing.

2. Draw the animals in the rainforest layers picture.

**okapi** (a giraffe-like mammal)

**giant anteater** (a large mammal)

**blue and yellow macaw** (a parrot)

**Brazilian salmon tarantula** (a large spider)

**poison frog** (an amphibian)

**orangutan** (a great ape)

**golden lion tamarin** (a monkey)

**sun conure** (a parrot)

# Animals in the Layers of the Rainforest

Layer	Animals
<b>Forest Floor</b> Animals may have the ability to camouflage themselves against soil, tree trunks and leaves. They are not good at climbing.
